

complete computer solutions

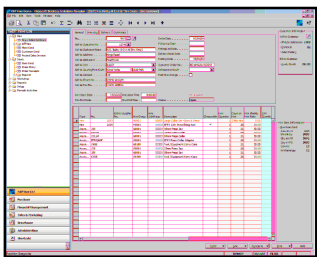

Turnkey was established in 1980 and has been a Microsoft Gold Certified Partner since 2004. We provide the following services to over 1,200 licensed users across the UK:

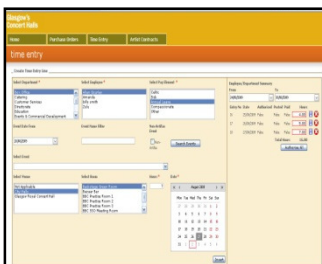

Microsoft Dynamics NAV (Navision) – Microsoft’s No.1 selling Business Management System provides financials, distribution, inventory & warehouse control, treasury management, manufacturing, human resources & payroll as well as a range of vertical market solutions. There are over 1.2 million licensed users worldwide and Turnkey have over 1,200 ranging from single user to multi-user over multiple UK and overseas sites. Our Gold Certified team have been delivering NAV solutions since 1996.

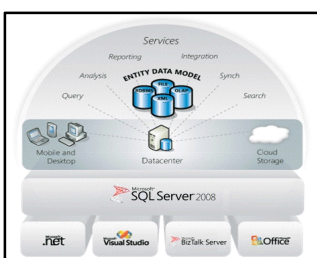

ZAP Business Intelligence for NAV – recently awarded Microsoft’s Global ISV developer - 2009, ZAP provides users with a simple to use system which delivers dashboards, KPIs (Key Performance Indicators) highlighting business trends and issues for management. Full drill-through allows issues to be investigated in more detail. A powerful wizard helps quickly create the data cube on which the dashboards and reports are built and users can quickly and easily build screens which are accessed through Internet Explorer.

Bespoke NAV Solutions – we have a range of solutions for specific industry sectors built on the powerful development capabilities of Microsoft Dynamics NAV. These include solutions for plant & tool hire, timber, construction, builders’ merchants and electronic point-of-sale. And, because NAV is both a fully featured accounting solution and a development tool, we can ensure that the system works the way you want it to, rather than you having to adapt your business processes to suit the system. Meaning, you have a 100% fit and a highly efficient and cost-effective solution to your business needs.

Web Solutions - We also design and host websites and provide applications which access, interrogate and update your back office data through simple web browsers. Because Navision’s service tier allows us to quickly replicate key business processes on the web, we can reduce the cost per user to one tenth of the normal Navision price. And, by using SQL Reporting Services and SharePoint, we can simplify the way users access and report on their data, including configuring the system to provide the regular delivery of key reports by e-mail.

Networks & Infrastructure – our experienced infrastructure team provide local and wide area networks – servers, desktops, laptops and all associated software – delivering and supporting systems across the UK. Our support contracts are tailored to the business needs but include remote monitoring of the infrastructure to identify and resolve issues before they become critical. For many businesses we are the outsourced IT department but we are equally comfortable working alongside incumbent hardware providers and ensuring the environment maximises the performance of our solutions.
